

Chatham

storm drainage improvement project

YOUR STORM WATER FEES AT WORK

April 2015

Charlotte-Mecklenburg Storm Water Services and consulting engineer, Kimley Horn and Associates, continue with the planning phase.

The project team is looking into possible system upgrades to address structure and street flooding in the project area. Potential improvements in the form of one alternative study are being finalized by Kimley Horn and Associates. After all potential alternatives are studied and evaluated, a recommended alternative to remedy the flooding issues will be shared with the neighborhood for feedback.

Waterways Need Plant Buffers

Buffers are trees, bushes, and deep rooted plants along a stream, pond, river or lake. They reduce property loss from erosion, support fish and wildlife, and improve water quality.

If my property is eroding, what can I do?

- Plant native bushes and trees!
- Leave grass unmowed.
- Keep herbicides away.
