

Gaynor Storm Drainage Improvement Project

Dear Resident:

Charlotte Storm Water Services needs your input! Your neighborhood has been identified as a possible location for storm water improvements. The project area covers approximately 160 acres and is shown below. This project is in the very early planning stages and we would like your input to help us identify storm water problems in your area. To assist in this effort, please complete the enclosed questionnaire, even if you have not experienced problems, and return by May 25, 2009. Postage is prepaid.

We will use customer service requests (311 calls), your questionnaire responses, and field review to refine the project limits. After this has been done and the area has been selected for improvements, we will be sending you additional information about the process. Thank you very much for your input and we look forward to working with you.

If you have any other questions or concerns related to the project, please direct them to the Project Manager, Corky Botkin at 704-432-5536 or cbotkin@ci.charlotte.nc.us.
