

October 2015

Project Status:

Charlotte-Mecklenburg Storm Water Services has completed the planning phase for this project. The recommended alternative was presented at a public meeting in May of this year. The meeting presentation and minutes are included on the project website.

Next Steps:

At this time we are working with our consultant to determine additional survey information needed for the design phase. Property owners should expect to see surveyors on site with their equipment during November and December gathering this additional information.

Investing in Infrastructure

The City replaces pipes, storm drains and other structures when they deteriorate or become too small to handle increases in stormwater. Investing in infrastructure protects public safety, guards private property, improves water quality and enhances quality of life.

The Hill Street Storm Drainage Improvement Project goal is to reduce flooding of streets and structures throughout the neighborhood.
