

November 2015

Project Status:

Staff changes at Dewberry Engineers have impacted the design schedule slightly. The project team along with management are working through these challenges and a resolution will be reached soon.

Next Steps:

The project team is fine tuning portions of the design related to the culverts under Park Road as well as optimizing the alignments of nearly a dozen different utilities at the same location. The permitting process continues. In the coming months, the consultant will submit an updated draft of the design plans for the project team and stakeholders to review.

Investing in Infrastructure

The City replaces pipes, storm drains and other structures when they deteriorate or become too small to handle increases in stormwater. Investing in infrastructure protects public safety, guards private property, improves water quality and enhances quality of life.

The Lilly Mill Storm Drainage Improvement Project goals are to reduce structure and street flooding throughout the neighborhood and stabilize streams.
