August 2015

Project Status:

Charlotte-Mecklenburg Storm Water Services and engineering consultant, US Infrastructure of Carolina, Inc., continue work on the real estate and permitting phase. During the permitting phase, the project team will obtain the required water quality permits from Federal and State agencies.

Next Steps:

After the real estate and permitting phases are complete, the bid phase will begin. During this phase, the final design plans will be circulated to qualified contractors for a competitive bidding process. After City Council approval, the construction contract will be awarded to the lowest responsible bidder.

Investing in Infrastructure

The City must replace pipes, storm drains and other structures when they deteriorate or become too small to handle increases in stormwater. Investing in infrastructure protects public safety, guards private property, improves water quality and enhances quality of life.

The Lyon Court Storm Drainage Improvement Project goals are to reduce flooding of streets and structures, as well as reduce stream bank erosion by improving the storm drainage infrastructure within the project area.
