

July 29, 2016

Project Status

Charlotte-Mecklenburg Storm Water Services and consulting engineer, The Isaacs Group, continue with the design phase. Design work includes locating utilities, verifying pipe clearances, creating computer generated maps and resolving any utility/pipe conflicts. Preliminary design plans have been submitted by the consultant and are being reviewed by City staff.

Next Steps

Once all preliminary plan comments have been addressed, the required water quality permits are obtained from Federal and State governments. Other permits for erosion control and water/sewer relocations will also be obtained during this phase. The permitting phase typically lasts 3 to 9 months.

Investing in Infrastructure

Charlotte has an aging public storm drainage system, much of which is past its useful life. The City repairs, replaces and installs new storm drainage infrastructure when it deteriorates or cannot handle increases in stormwater. Investing in infrastructure protects public safety, guards private property, improves water quality and enhances quality of life.

The Margaret Turner Storm Drainage Improvement Project goal is to reduce flooding of streets and structures throughout the neighborhood.
