

Meadowridge

storm drainage improvement project

YOUR STORM WATER FEES AT WORK

June 11, 2012

Dear Resident,

Charlotte-Mecklenburg Storm Water Services held its second public meeting on June 10 at Living Saviour Lutheran Church for the Meadowridge Storm Drainage Improvement Project. The goals of this project are to reduce flooding of streets and structures, as well as reduce erosion along the stream and channel.

Meeting highlights:

- Project Manager Danee McGee welcomed the attendees and introduced the project team.
- McGee explained the number and the severity of 311 requests received from property owners in the neighborhood. Some of the requests were related to habitual stream flooding, excessive stream erosion and channel blockages.
- Based upon the current infrastructure problems and the number and severity of the 311 requests, the City hired WK Dickson to perform the drainage study on the watershed.
- McGee explained what a Storm Water Project was and that this drainage study is just one of Charlotte's many Capital Improvement Projects.
- McGee discussed public input and reminded attendees how it is collected for this project: questionnaires mailed at the start of the

project, feedback gathered during the first public meeting and feedback that would be gathered at the conclusion of this meeting.

- Scott Sigmon, Project Manager for WK Dickson reviewed the problem areas and the solutions developed.
- Sigmon discussed the development of alternative solutions consisting of solutions that did not strictly meet the City Design criteria, but were instead a compromise between the more stringent City Design criteria and the citizen input gathered in the original public meeting. He explained that based on the results of this public meeting, the alternative solutions will be further refined so that they reflect any new or additional input gathered.
- A question/answer session was held.
