

Princeton/Somerset

storm drainage improvement project

YOUR STORM WATER FEES AT WORK

November 18, 2011

Dear Resident,

Charlotte-Mecklenburg Storm Water Services held its first public meeting on October 20, 2011 at Freedom Park for the Princeton/Somerset Storm Drainage Improvement Project. The goals of this project are to reduce flooding of streets and structures, as well as reduce erosion along the stream and channel (by stabilization) where needed.

The meeting provided the opportunity to present the results of the existing conditions analysis and receive resident input and suggested solutions. Meeting highlights:

- Project Manager Susan Tolan welcomed the attendees, introduced the project team and explained the history as well as the purpose of the project.
- Patrick Blandford, Project Manager for our design consultant HDR, presented the results of the existing conditions analysis.
 1. Additional catch basins are needed in the streets.

2. Majority of the downstream system is inadequate to pass 10-year flows without surcharging the system.
 3. Several structures are potentially impacted by flooding.
- Tolan explained that HDR will use the information collected at the public meeting to finalize the existing conditions analysis report. This will provide the baseline assessment for potential design solutions. A preferred solution will be presented at the next public meeting.
 - A question/answer session was held.

For more information about this project or detailed meeting minutes, please visit our website at <http://stormwater.charmeck.org> and click on *Storm Water Projects, Storm Water Projects* again, then *Princeton/Somerset*.

If you have any questions about this project, please contact Project Manager Susan Tolan at stolan@charlottenc.gov or 704-432-0407.
