

June 2016

Project Status

After the prior project engineer left Dewberry Engineers, Brian Dey came in as project team engineer. The new team is making progress with the Tattersall project. The team is evaluating a few challenging spots in the design plans before finalizing the easement maps.

Next Steps

Once the maps have been reviewed and accepted, a public meeting will be held to kick off the real estate phase of the project. During this six-to-nine month phase, real estate representatives contact property owners to acquire easements necessary for construction.

Investing in Infrastructure

Charlotte has an aging public storm drainage system, much of which is past its useful life. The City repairs, replaces and installs new storm drainage infrastructure when it deteriorates or cannot handle increases in stormwater. Investing in infrastructure protects public safety, guards private property, improves water quality and enhances quality of life.

The Tattersall Storm Drainage Improvement Project goals are to improve storm drainage infrastructure, reduce erosion and flooding of streets and structures.
