

December 2015

Project Status:

Charlotte-Mecklenburg Storm Water Services and Mulkey Engineers & Consultants continue to work on the design phase. In an effort to develop the most cost-effective solution for the entire project area, two locations were identified for potential construction cost savings requiring changes in design.

Next Steps:

Mulkey Engineers will incorporate design changes to the overall design plans. Once completed we will schedule a public meeting to share the preliminary design plans and kickoff the easement acquisition phase. Meeting details will be mailed to residents approximately two weeks prior to the meeting.

Water Oak Storm Drainage Improvement Project

Engineering & Property Management
Storm Water Services Division
600 East Fourth Street
Charlotte, North Carolina 28202

Investing in Infrastructure

Charlotte has an aging public storm drainage system, much of which is past its useful life. The City repairs, replaces and installs new storm drainage infrastructure when it deteriorates or becomes too small to handle increases in stormwater. Investing in infrastructure protects public safety, guards private property, improves water quality and enhances quality of life.

The Water Oak Storm Drainage Improvement Project goal is to reduce flooding of streets and structures by improving the storm drainage infrastructure within the project area, while not causing downstream impacts.
