

It's no secret...

Stormwater infrastructure isn't getting any younger.

-  **Nothing lasts forever.** Even the pipes that move stormwater from streets to local streams wear out with age.
-  **What's underground matters.** Repairing and upgrading stormwater infrastructure improves road safety and reduces flood risks.
-  **We all benefit.** Storm drainage improvements enhance our community and protect people, property and streams.

Stormwater Infrastructure Improvements

Out with the OLD & In with the NEW

After decades of moving stormwater under North Caldwell Street, increasing amounts of runoff were too much for the 1940s culvert to handle.

Now, two box culverts carry much larger amounts of stormwater which reduces flood risks.

There are many more projects underway! More than 40 neighborhood storm drainage improvement projects and 100 maintenance and repair projects are in progress.
