

**CHARLOTTE-MECKLENBURG CONTINUUM OF
CARE (CoC)
2019 NOTICE OF FUNDING APPLICATION (NOFA)**

Methodology for assigning scores

- 1) Each performance measure will be scored with a goal of placing an equal number of projects in four, tiered categories.
- 2) To that end, projects will be scored in relation to each other as follows*:

Step 1: All responses will be placed in numerical order.

Step 2: The ranked list will then be broken down into 4 groups**

Step 3: Projects will be assigned score according to the group they are in.

- highest group numbers will receive max points
- next group will receive 75% of max score
- third group will receive 50% of max score
- final group will receive 25% of max score

*For exits to PH, project will be scored with same PH component (RRH or PSH)

** If the total number of projects responses is not divisible by 4, then excel will perform a statistical analysis and group projects into quartiles based on a bell curve methodology.

Note:

- Rounding principals will be utilized if response is not a whole number: down for .49 or under; up for .50 or higher.
 - Projects that consolidate projects will have each project scored individually.
 - If recommended to be included in CoC Consolidated Application, the consolidated project will be assigned the higher score of individual projects in the CoC Priority Listing.
- 3) Each question with a narrative response will be assigned a score (up to the maximum score available) by review committee members. The average of the assigned score will be used on the overall project scorecard.
