Wastewater Treatment Plant Project

Starting in July 2022, CLTWater will start construction on phase two of the rehabilitation to the Ashe Plantation Wastewater Plant to allow safe treatment of 100,000 gallons of water per day as a monthly average. This work is necessary for water quality standards and to serve the Mecklenburg County side of the Duck Creek basin. The upgrade will allow CLTWater to serve current customers in the immediate area including flow from 63 proposed homes on the Union County line. Limits on capacity have been capped.

Demolition of the Ashe Plantation wastewater plant may be several years away. The upcoming enhancements will assist in the wastewater treatment at the plant. The project will take an estimated 13 months to complete.

What to Expect:

- Deliveries of heavy equipment and materials. As needed through the rest of the project.
- A large excavator on plant property.
- Contractors will park on the plant site and only park on Quarters Lane if necessary.
- Some construction related noises during weekdays.

Additional Information:

- Only flush the three P's down the toilet (pee, poo, and toilet paper).
- Put wipes and other items like feminine hygiene products, q-tips, and non-toilet paper in the trash.
- Storm drains, yard inlets and roof drains should never be connected to the sewer system.
- Please review the City of Charlotte's webpage before draining an entire pool to ensure compliance.
- If you see or suspect something suspicious at the plant, please call 311 or 704-336-7600 anytime.
- If after 7 pm or on a weekend, you will hear a message about CharMeck 311 being closed and then an option to talk to our 24/7 dispatchers.
