

McMullen Creek Tributary to Quail Hollow Wastewater Improvements Project

Construction on Golf Course, near Ballentyne Court, Seminole Court and Baltusrol Lane

WHAT: Contractors for Charlotte Water, led by Atlantic Coast Construction, will begin installing cured-in-place-pipe, a process referred to as CIPP, on the golf course along the 15th, 14th and 13th holes as part of the McMullen Creek Tributary to Quail Hollow Wastewater Improvements Project. This work includes crews installing a sock-like lining inside existing pipe through manholes and coincides with other construction activities including open cutting and replacing existing pipe segments as well as rehabilitating manholes. Once completed, the project will enhance the wastewater system in the community and protect the water quality in the creek.

WHEN: Crews will begin mobilizing and preparing the area for construction the week of November 8, with CIPP construction beginning November 15 through December 17. CIPP construction will only take place on Mondays. Please note construction schedules are subject to change, due to weather and other conditions.

WHERE: Crews will be working along the alignment on the Quail Hollow Golf Course, off of Gleneagles Road, behind Ballentyne Court (see map).

WHAT TO EXPECT WITH CIPP REPAIRS:

Clearing – Trees, bushes and shrubs will be removed for access to the alignment and restored to grass once construction is complete.

Moving equipment on site – Crews will move construction equipment and materials to easements along the project site throughout construction.

Odor – You may notice some odors outside during the work.

Continuation of service – No disruption to water or wastewater service is expected during this work.

Lane/road closures and detours around work area – A lane closure on Gleneagles Road, near Out of Bounds Drive, will start November 8 and could be in place until the end of February 2022. Motorists and pedestrians should follow all traffic control signs to navigate around the work. Access to residences will be maintained.

Construction traffic and loud machinery – Small to mid-size machinery will be within the construction easements. Crews will use bypass pumps, which can be loud, to divert flow away from the work area.

NEXT STEPS: CIPP work is expected to be completed by December 17, with restoration activities following until the end of February 2022. Please note there may be periods of inactivity throughout this project and schedules are subject to change, due to weather and other conditions.

QUESTIONS: For updates on project progress, please visit the project website at bit.ly/CLTWaterQH or by visiting charlottewater.org (click on "projects"). If you have a question, please contact project manager Irene (Tasha) Okioga, PhD, PE, 704-336-1063, Irene.Okioga@charlottenc.gov.
