

Project Status

Charlotte-Mecklenburg Storm Water Services and consulting engineer The Isaacs Group continue with the planning phase. After studying the watershed, the team continues to evaluate alternative solutions that will maintain an efficient drainage system while minimizing neighborhood impacts. Alternatives for the project continue to be refined based on recent private development activities in this watershed.

Next Steps

Once a potential solution is selected, a public meeting will be held for input from property owners.

Investing in Infrastructure

Storm Water Services designs and constructs projects that make a difference in the lives of residents across the city. Our community benefits when stormwater quickly drains off roads, flood risks to homes are reduced and the health of local streams is protected or improved.

The Chatham project goal is to reduce street and structure flooding throughout the neighborhood and to address stream erosion.
