

Charlotte Water is committed to serving our community 24/7, 365 days a year

Did you know?

We receive our water from Mountain Island Lake and Lake Norman. Water from Mountain Island Lake goes to Franklin and Vest Water Treatment Plants. Water from Lake Norman flows to Lee S. Dukes Water Treatment Plant. **Across our plants, we pumped an average of 118 million gallons a day (MGD) in 2022!**

Plant	Daily Capacity (MGD)	Number of Water Quality violations in 2022
Franklin	132	0
Vest*	24	0
Dukes	18	0

*Vest Treatment Plant was online only March-June 2022 due to renovations

PARTNERSHIP FOR SAFE WATER

Charlotte Water proactively participates in the American Water Works' Partnership for Safe Water, aimed to optimize water system operations.

PROJECT SPOTLIGHT

Historic Vest Water Tower Lighting

Last year, we celebrated 100 years of the historic Vest Water Tower. The reliability and consistency of infrastructure such as this tower has allowed our region to thrive and rely on high-quality water services.

2022 Drinking Water Quality Report

This report summarizes the Consumer Confidence Report (CCR), required by state and federal governments to be published annually by every drinking water supplier.

For Detailed Results »

To view the full CCR report, visit [CLTWaterWQReport.org](https://www.charlottenc.gov/water/Water-Quality)

Additional details on laboratory data, versions in multiple languages and more are available on our website's water quality pages at: <https://www.charlottenc.gov/water/Water-Quality>

Charlotte Water is committed to responsible financial stewardship on behalf our customers. This report was printed at a cost of \$0.10 per unit.

This document was printed on paper from well-managed FSC®-certified forests and from recycled materials. FSC is dedicated to the promotion of responsibly managed forests and a commitment to environmental stewardship each step along the supply chain.

Water Quality Testing

Charlotte Water's top priority is to ensure that the water you use to wash your hands, bathe your children, and prepare healthy meals is not only safe to use, but meets all state and federal drinking water standards.

Our highly trained laboratory analysts and water quality professionals perform more than 170,000 tests per year to ensure the safety and quality of your drinking water.

According to public health experts at the U.S. Environmental Protection Agency (EPA), drinking water may reasonably be expected to contain very small amounts of impurities. It is important to note that the water is safe when tests reveal the presence of impurities that are below health levels.

At our state-of-the-art and independently certified laboratory facilities, we test for more than 150 regulated contaminants and more than 740 unregulated contaminants.

Charlotte Water staff also monitor over 300 field sampling stations to ensure drinking water remains high quality from the treatment plant to your tap.

Charlotte Water is accredited by the National Environmental Laboratory Accreditation Program (NELAP), in which laboratories voluntarily participate in a rigorous program aimed to ensure quality and reliability of environmental data.

EPA Proposes MCL for PFAS 'Forever Chemicals'

PFAS, known as "forever chemicals," are a family of thousands of compounds that do not break down naturally in the environment or in the human body.

Charlotte Water proactively monitors for more than 70 PFAS chemicals and results show low or undetectable amounts, all below the proposed EPA maximum contaminant level (MCL).

Lead Free CLT: Charlotte Water's Lead Reduction Program

In 2021, the Environmental Protection Agency (EPA) updated and revised its Lead and Copper Rule (LCRR), which strengthened regulations for eliminating lead from drinking water to better protect children and communities.

Charlotte Water has monitored lead and copper since 1991 and has always met state and federal standards. Charlotte Water actively conducts corrosion control measures, such as delivering drinking water at an average pH of 8.6 to prevent corrosion during distribution. Generally, lead corrosion is of limited concern in Charlotte because the city experienced most development after the initial federal lead ban. However, small amounts of lead can get into water from customer owned water service lines and household plumbing that contains lead.

In compliance with the recently strengthened Lead and Copper Revised Rule, Charlotte Water will be undertaking a multi-year project to inventory pipe materials, increase testing, and reduce lead risk.

To learn more, visit charlottewater.org/lead.

Did you know?

Potential contaminants are often measured and regulated in parts per million all the way to parts per trillion!

One part per million (ppm) is like dropping two drops of ink into a 10-gallon fish tank.

Charlotte Water Alerts

This year, we launched our Charlotte Water Alerts system, which automatically notifies customers when unexpected outages happen. It is our top priority to communicate as quickly as possible and last year, we sent over 1,200 alerts. Property managers and renters can also sign up by visiting charlottewater.org

Register to stay informed about:

- Water outages (if your phone number isn't in the billing system)
- Wastewater spills
- Construction alerts
- Water quality advisories

To learn more about **Charlotte Water Alerts**, please visit our website:

Charlotte Water maintains

319,399
active water service lines

4,525
miles of water mains

**Statistics above are from fiscal year 2022, ending in June 2022*

Highlights of 2022 Water Quality Tests and Results

Contaminant or Water Quality Metric Tested	What is it?	Why We Test	Likely Source?	Was it a Safety Concern at the Levels Detected?
Microbes like Coliform, E. coli, Cryptosporidium	Very small organisms	Can make people sick	Naturally present in environment or fecal contamination	No
Turbidity	Measures of the effectiveness of filtering	The clearer the water, the better!	Common soil runoff	No
Fluoride	Naturally occurring compound, additive proven to strengthen teeth	High levels can cause stains on teeth	Erosion of natural deposits	No
Lead and Copper	Metal contaminant due to plumbing corrosion	High levels can lead to health issues	Corrosion of indoor plumbing, erosion of natural deposits	No
Disinfectant residuals and byproducts like chlorine, trihalomethanes, haloacetic acids	Byproducts of the disinfection process	High levels can cause cancer	Water purification process-controlled levels of chlorine prevent bacterial growth in pipes	No
